siteglide

Limitless Digital Experiences

The tools and ecosystem to build any kind of scalable web project.

siteglide.

The Scalable Development Platform

The leading Digital Experience Platform (DXP) for Small Business that scales to Enterprise and gives you total control over data and code, with its API-First design.

Total control to build anything

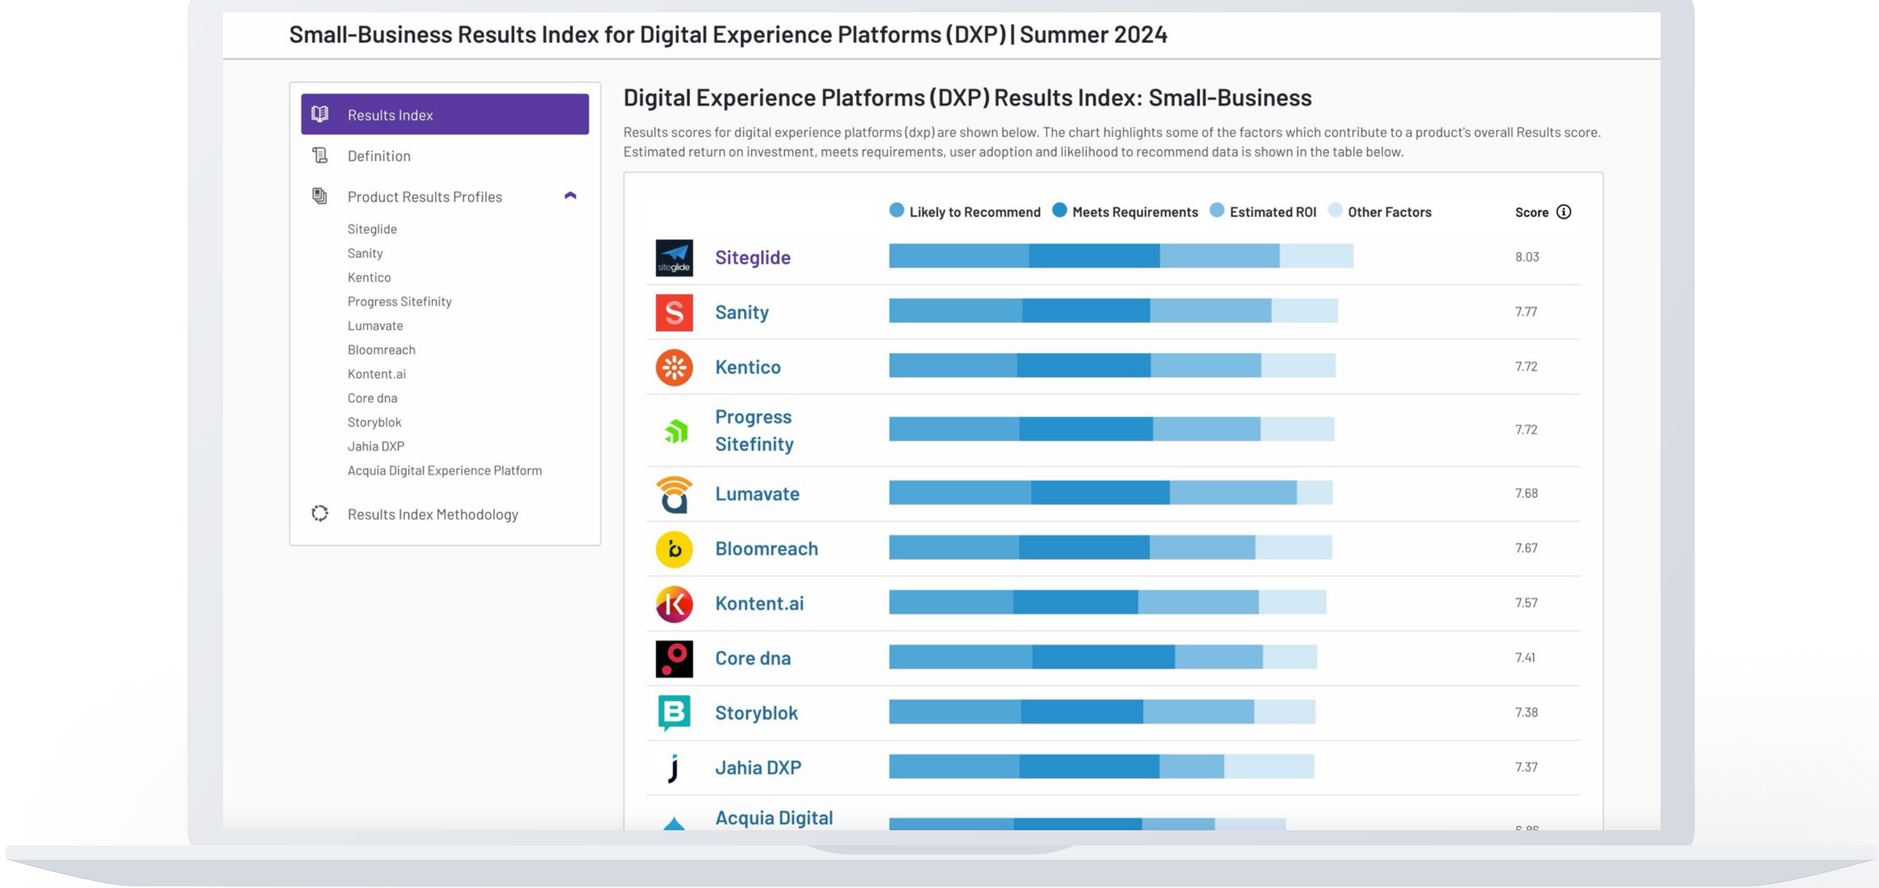
Agencies across the globe build websites, marketplaces and bespoke applications.

Enterprise Infrastructure

Siteglide uses Enterprise-grade infrastructure including AWS, Stripe, SendGrid and platformOS.

The Top DXP for Small Business Results

We consistently win G2 Awards across a range of categories



Recommended by Digital Agencies Across the Globe

Having started out as a web agency we know the challenges and are dedicated to helping solve them.

"You ship features fast"

"Your solution has an accessible and responsive team behind it"

"Probably the most important vendor relationship I have"

"I can say yes to any client request"

"The Siteglide team are all pleasant, intelligent, accountable and (amazingly) responsive people, makes working on this platform a genuine delight.

"I most appreciate Siteglide's quest to make their product future-proof."

"The customer support is second to none."

"Incredible support, amazing platform."

6 Standout Reasons to Use Siteglide

Just a few reasons why we believe Siteglide is the better choice.

1

Open Platform

Siteglide was built because of inherent limitations with most platforms. The solution is to remove the dependency on the UI/tools which enables Open Source benefits without the drawbacks.

2

Get Under the Hood

If you can't do what you need within Siteglide itself that's where the Open Platform benefits come in. GraphQL is just one way you can build beyond Siteglide native features.

3

Sitebuilder Design System

Build faster, compliant websites that can easily be managed and extended by non-technical users. No drawbacks, everyone wins: Designer, Developer and Site Admins.

4

Marketplace

Building on the Modular approach our Marketplace ecosystem speeds up development into reusable Modules. Most importantly everything is fully customisable as if it were built from scratch.

5

Only Pay For What You Use

With Siteglide it's one bill for all sites and you only pay for what you use at a rate that reduces as you use more. No more feature limits or steep price hikes to the next plan.

6

Service and Support

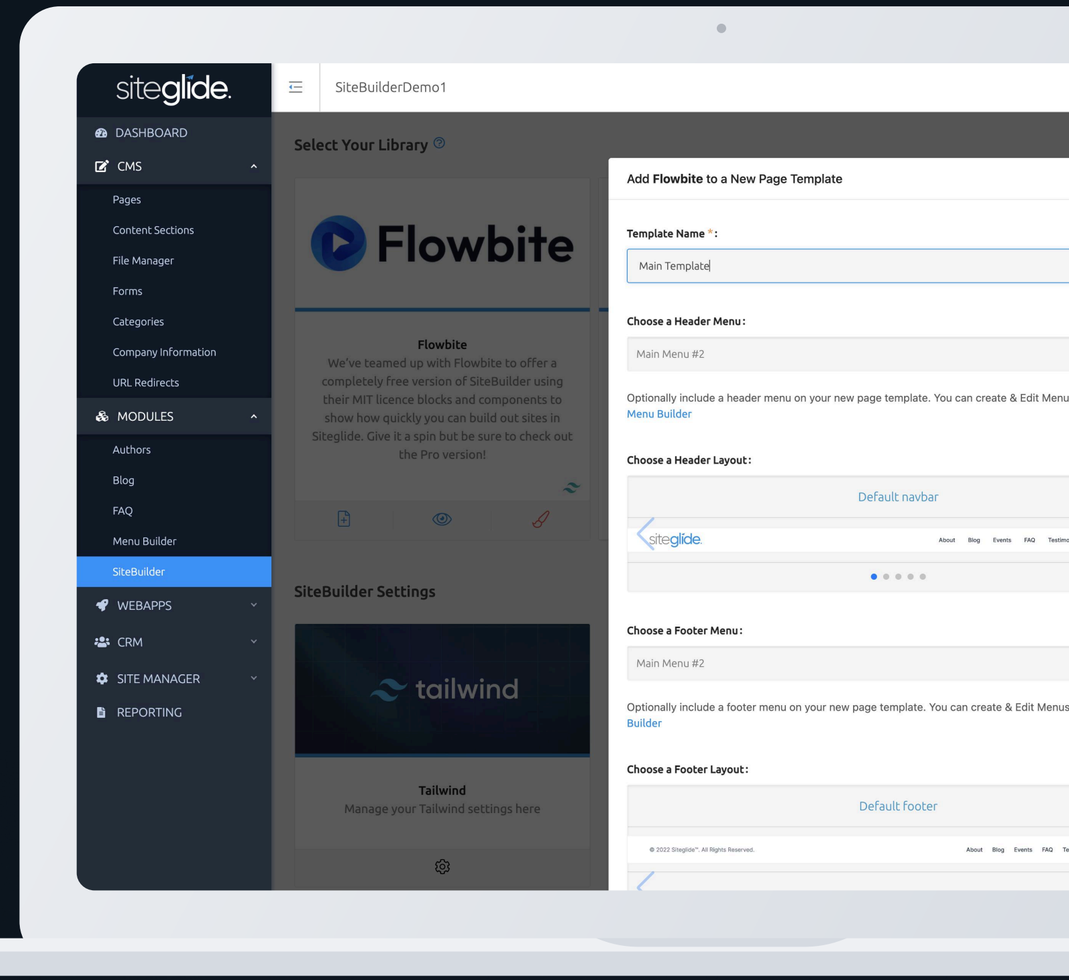
With Siteglide you have direct access to the team and we've built our reputation on providing the best support possible. Our services team, Sitegurus, can even help build Roadmap features for you.

sitebuilder

The No-Code Siteglide UI

SiteBuilder leverages the powerful Siteglide functionality but makes it easy to build out projects without having to code it all.

You have full access to the code and can fully customise everything, SiteBuilder just lets you choose your setup and configures it for you.



Drag and Drop

Install fully responsive, best practice themes and layouts with a few clicks.

Pre-configured Layouts

Module layouts are fully configured to an ever growing list of Marketplace Modules.

Why SiteBuilder

Deliver Better Projects, Faster. How?

SiteBuilder helps overcome the typical project pitfalls without losing control or flexibility.

1

Design System

Design rapidly using a comprehensive Figma Design System like Flowbite

2

Developer Handoff

Use the matching code Blocks and Components to kickstart development

3

Functionality Baked In

Use SiteBuilder's simple UI to combine static HTML with fully-functional blocks

4

Total Control

Meet any project brief with total control to fully customise code, content and data

5

Enterprise Infrastructure

Siteglide ensures Security, Performance, Reliability, Flexibility and Scalability

6

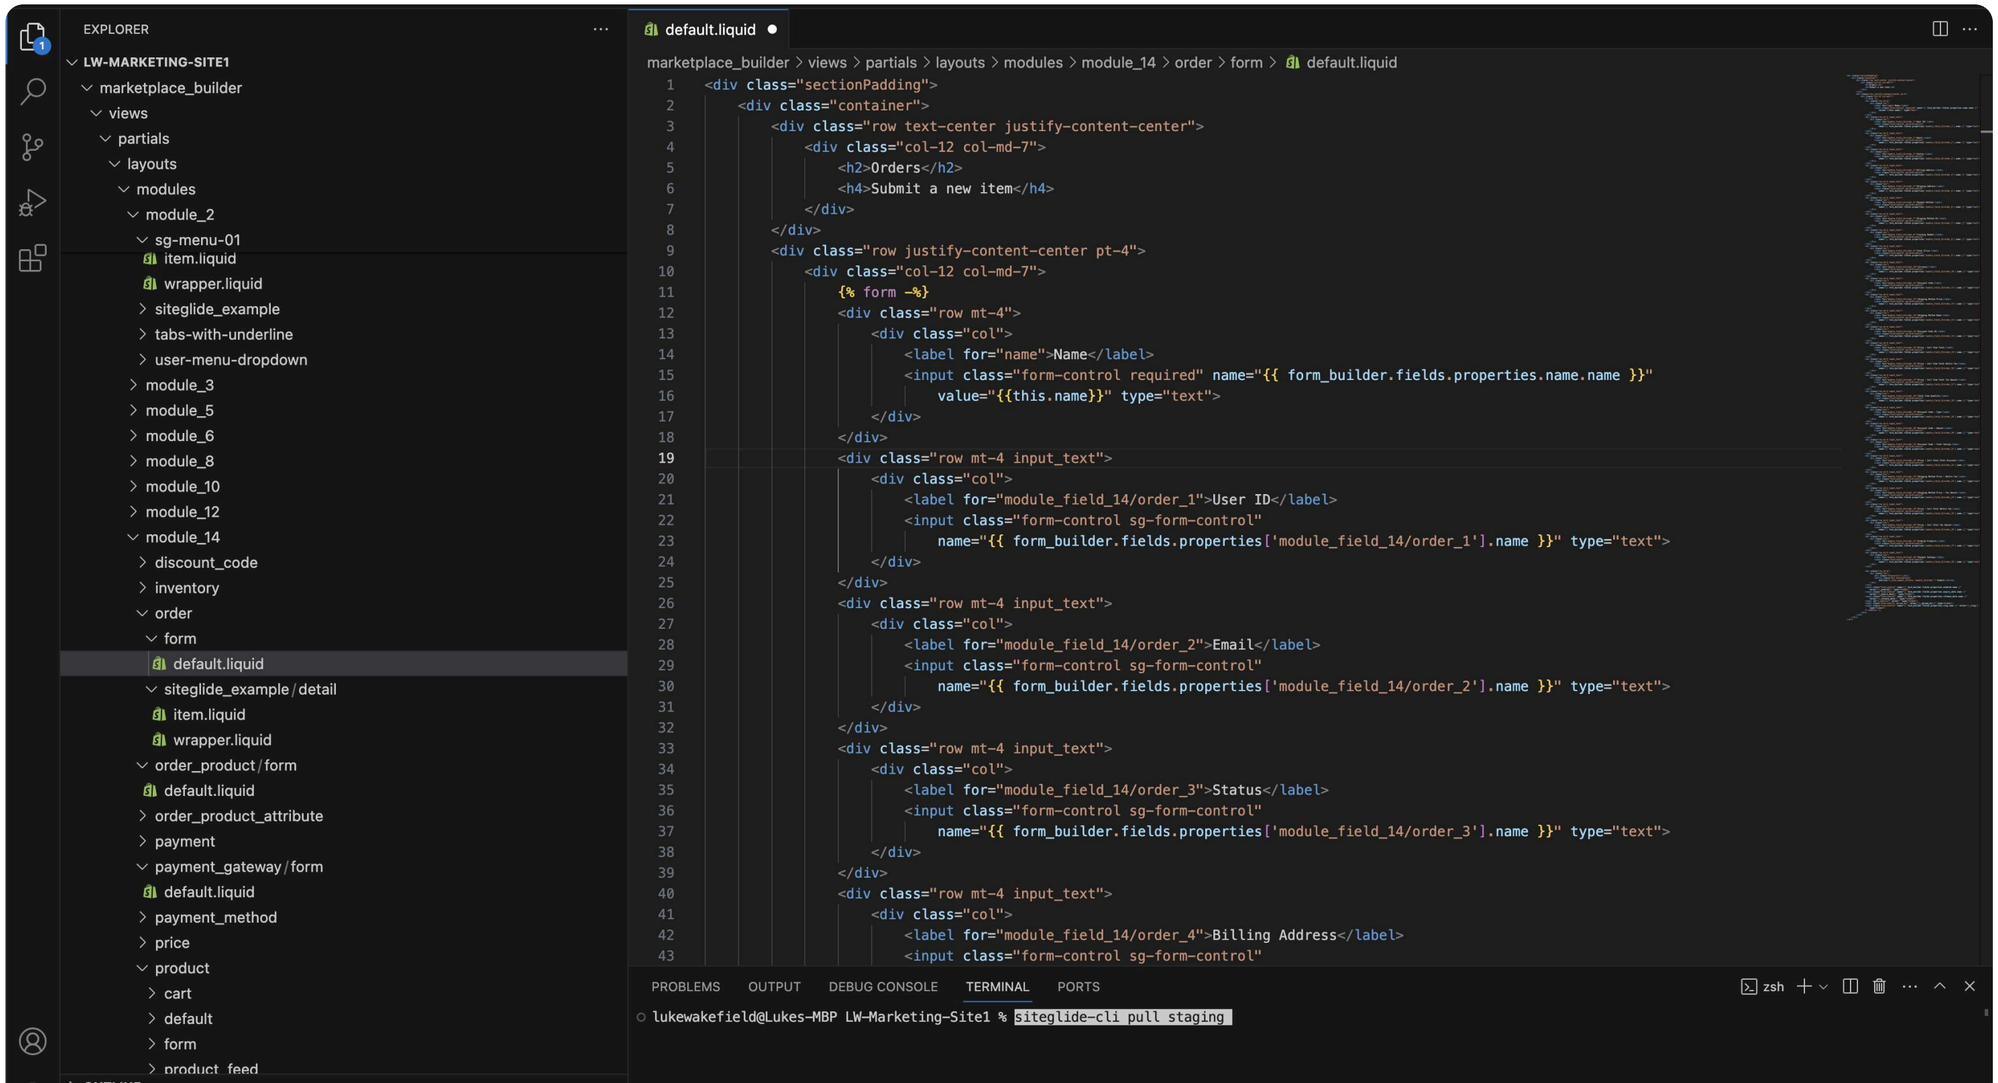
Support & Community

Experts across the globe providing support, templates, modules and much more

siteglide.

No Limits Development with our CLI and API

Use GraphQL, Liquid, YML and the usual HTML, CSS, JS to fully control every aspect of your sites.



Studio

No-code Drag and Drop Editor

Easily create and manage best-practice, performant and responsive pages using Studio.
